TEMPERED GLASS SCREEN PROTECTOR FOR APPLE IPHONE 6 PLUS

Description

GLASS: Tempered glass screen protector

GLASS is an alternative solution to the standard protecting films: a completely new philosophy aimed to prevent smartphone display's breaking issues.

The competitive edge of GLASS, comparing to a traditional soft screen protector made of pet material, lies in its rigid and thick texture that can guarantee a stronger endurance of the screen under strong impacts.

GLASS results smooth to touch as the original glass screen panel.

GLASS protects not only from shocks and scratches but it also has successfully passed the "Hammer Test".
